

Keeping ownership and control over all of your email communications, documents and other unstructured data is a constant challenge for today's organizations. **ArchiveOne manages your email and files securely, making it easy to manage capacity, comply with retention policies and discover relevant information** no matter where it resides.

- Security
- Storage**
- Application Delivery
- Productivity**

## The Barracuda Advantage

- Manages data in place, with no need to archive first
- Single solution covers multiple email sources
- Improves performance and data backup times
- Manages Exchange capacity and mailbox quotas
- Enables email investigation, eDiscovery and eDisclosure
- Seamless, unobtrusive end user experience

## Product Spotlight

- Integrated platform for archiving, compliance and search
- Covers data in mailboxes, archives and PST files
- Data compression and deduplication minimizes storage
- Single search across live and archived data for files and email
- Automatically enforces compliance with retention and deletion policies
- Scales to tens of thousands of mailboxes, across multiple Exchange servers

**Built on a simple and flexible design, ArchiveOne gives your organization ownership and control over your data and offers a single solution for capacity management, regulatory compliance, data retention and eDiscovery.**

It is designed for today's business environment where email data resides not just in Exchange or Office 365, but also in PST files on network file servers or end user devices, and where it is not feasible to archive all data before enforcing retention or searching messages. This "real world" approach of ArchiveOne separates it from the competition because it aligns with the needs of the business today and tomorrow.

ArchiveOne seamlessly integrates with Outlook and Outlook Web Access (OWA) and the majority of customers are installed, configured and ready to archive in one day, in fact many refer to it as a "set and forget" solution. End users can access archived data from their desktops or mobile devices via an integrated web-based search portal – even when they are offline, offering a truly transparent end user experience.

### Policy-based intelligent archiving

Implement capacity management based on policies to intelligently determine which files, emails, attachments and calendar items to archive and apply appropriate retention periods.

Any data found in Exchange mailboxes, public folders, client PST files or network file servers can be automatically archived to any designated storage device. And policies can be defined by age, metadata, content and many other options.

### Manage and search data in place

Apply retention policies, enforce legal holds and even dispose of emails and files without first archiving the data. Automate the retention and deletion of email data to maintain compliance and minimize corporate risk.

Relevant data can be easily identified, preserved and collected for internal investigations, litigation, FOIA and eDiscovery requests.

### Advanced PST Management

Systematically discover PST files throughout the organization wherever they reside and automatically determine and assign the PST file owner.

Centralize and manage PST files by copying or moving them to a central location. Eliminate them by selectively migrating data to on premise Exchange, Office 365 or ArchiveOne, then automatically disconnecting and deleting the PST files.

## Key Features

### Policy-based archiving

Implement comprehensive policies to archive, preserve, collect or expire live, PST file and archived data for defensible information management.

### Search data wherever it resides

Find and retrieve email data across your organization whether in live mailboxes, PST files, public folders or archived.

### Compliance management

Automatically maintain compliance and manage cost of archive by enforcing corporate retention and deletion policies.

### Journal archiving

Capture and store email communications for some or all members of your business in a separate, secure repository.

### Discover and Preserve Data

Identify, collect and enforce legal hold on relevant data, then review and present to meet regulatory or legal eDiscovery demands.

### PST Management

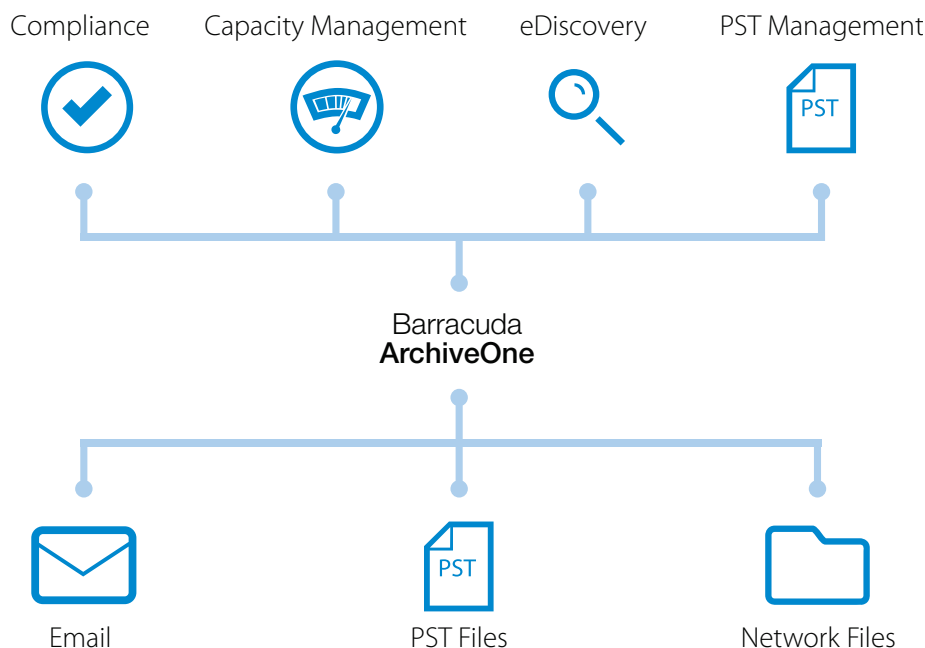

Discover, centralize, migrate and eliminate PST data and control all corporate email centrally.

## ArchiveOne Options

ArchiveOne provides archiving and information management for email including PST files. For similar granular control over network files, **ArchiveOne Files** can be used in conjunction with ArchiveOne or as a standalone product.

## ArchiveOne Files

Using the same policy-based approach, ArchiveOne Files offers reliable file archiving and management capabilities, solving data accumulation problems, delivering an immediate reduction in storage and improving performance. The software provides a seamless and completely transparent end-user experience requiring no desktop software to be installed on client systems. ArchiveOne Files is configured and controlled via a simple and intuitive management console, enabling administrators to define policies with a high degree of granularity and allowing them to determine exactly how they want to manage network files.

## System Architecture

### ArchiveOne Server

- Central server application providing all email archive, search, retrieval and management operations

### ArchiveOne Quick Link Client

- End user application providing archive integration with Outlook

### ArchiveOne Quick Laptop Client

- Optional end user application providing offline access to archived email

### ArchiveOne PST Processor

- Optional client or server application to discover and process PST files

## Supported Environments

### ArchiveOne Server Components

- Microsoft Windows Server 2008 or later
- Microsoft IIS Version 7 or later
- SQL Server 2008 or later (Full or Express)
- Microsoft Exchange Server 2003 or later
- Microsoft Exchange Online or Office 365

### ArchiveOne Client Components

- Microsoft Windows XP or later
- Microsoft Outlook 2003 or later
